

Sahara Apartments Selects Count Me In Time and Attendance with Facial Recognition

LAS VEGAS – Count Me In, a wholly owned subsidiary of SkyWire, Inc., a nationwide Hospitality Solutions provider, SMS Mobile Marketing and Mobile Application Development company, announces completion of the deployment of the Facial Recognition for Biometric Time and Attendance solution at the Sahara Apartments in Tucson, AZ.

Ted Mehr Owner of Sahara Apartments in Tucson, AZ recently upgraded his TimeCard Monitor to include a facial recognition system. Ted has been using TimeCard Monitor for more than five years to fulfill his time clock needs. At times he had issues with his maintenance staff being recognized by the finger print readers.

This year Count Me In, integrated the FaceID100 facial recognition device with their version 6 software platform called TimeCard Monitor. Ted asked to be one of the first to implement the new addition to TimeCard Monitor. "I absolutely love our new face recognition system!" – Ted Mehr.
Tucson, AZ

Ted mentioned "how wonderful it is that no one has any problems signing in, especially with people who get their fingers dirty like our maintenance people". Ted went on to explain "The other huge advantage of the systems is that it does not depend on a PC".

Count Me In now offers three self-contained network terminals adding additional options to the existing product set. "The introduction of the FaceID100 (a facial recognition system) is an important addition to our overall forward looking products strategy" claims Shawn Harris President and CEO. Shawn adds "This is just the beginning of the enhancements that we have planned." Stay tuned to see how the TimeCard Monitor and our other workforce management mobile tools will revolutionize the industry.

SkyWire's new, FaceID100 terminals provide near real-time reporting and information on employee punches.

This allows manager's to make informed decisions based on accurate information about the current staffing at any given time. Additionally data may be stored on a remote device and all bidirectional communications to take place daily, weekly or once per pay period. With Time Card Monitor data is synced between back of the house servers and front of the house stand-alone capable clocks, giving Time Card Monitor the ability to deliver actionable workforce data in real or near real-time. The FaceID100 terminals offer TCP/IP, and have available Wi-Fi, or GPRS. They also have storage capability for thousands of punches and come with an available UPS to enable punching while your network and power are out.

Since the interface with Player Tracking is bidirectional, Marketers can delay an offer being sent to any guest that shows up as currently in play, thus avoiding interruption of gaming activities to redeem an offer. *Coupon Connect™* is a modular component of the *Mobile Connect™* product suite, which provides hospitality operators with the most advanced text messaging technology available.
